William Smith

As part of William Smith Group 1832, we are one of the UK's leading distributors of self-adhesive materials and associated accessories to the sign, graphics and building interiors industries.

We place high standards on everything we do. As a trade-only company, we understand our customers and respect their business.

Range

This guide is here to help you find the best material to suit your requirements. You can choose from a wide range of 3M, Avery Dennison, Arlon, VION®, Contra Vision®, SQUID, LX Hausys, Cover Styl' and R Tape sign making and digital printing films, application tapes and accessories.

Films are available in full, part or as custom slit rolls with most orders usually despatched within 24 hours. This allows you to minimise your stock holding and reduce overheads.

Material types include:

- Coloured Film
- Digital Printing Film
- Reflective Film
- Floor Graphic Film
- Vehicle Wrapping Film
- Décor Films
- Safety Marking Film
- Fluorescent Film
- Road Marking Film
- Screenprinting Film
- Application Tape
- Overlay Film
- Decorative Window Films
- Solar & Security Window Films

Service

With 190 years of operational expertise, we can offer you a reliable and dependable service. Our friendly and experienced staff can advise you about the best material for your specific requirements.

Our service includes:

- Same day despatch up until 6pm
- Full, part and custom slit rolls
- Short lead times provided for non-stock items
- Samples of material available on request
- Online ordering and price check accessible 24 hours a day
- New self-adhesive films added frequently

Choosing the right vinyl

Traditionally, there have been three main types of vinyl to choose between: cast, monomeric, calendered, and polymeric calendered. However, with an increased demand for more sustainable alternatives in recent years, PVC-free films have also become a popular, common choice for many installers.

Your choice of vinyl is often heavily dependant on its suitability for the project at hand. It is therefore incredibly important that any installer understands the key differences between the film types and the benefits and limitations that each one presents.

Cast Films

A cast film is made from a premium grade of PVC that starts life as a liquid which is poured into a drum. A layer of liquid is then scraped onto a liner. This is then dried and cured, coated with an adhesive followed by a backing liner. The original liner is then taken off. These films have an enduring quality and a long life.

Calendered Films

The difference between cast and calendered is that calendered films start their life as a solid. The calendering process involves adding plasticisers and stabilisers to the solid. Then it is all passed through rollers, called calenders, until the film reaches the required thickness. The material is then coated and a liner added. As the film is not flat to start with, in time it shrinks. Two types exist;

Polymeric Calendered Films

Polymeric films fare much better in exterior applications than monomeric films but are not suitable for applications with irregular surfaces. They have better grades of polymers added to reduce shrinkage.

Monomeric Calendered Films

Monomeric films are more rigid, without stabilisers or with a lower grade of stabilisers therefore they shrink, leaving the adhesive exposed beneath. In time the exposed adhesive attracts dirt and a sticky, black outline forms around the letters, logos or graphics. This will get worse over time and the vinyl face film will begin to curl up and flake off.

Monomeric films should only be used for short term applications.

PVC-Free Films

In the most basic explanation possible, PVC-free means there is no vinyl used in the product. Polypropylene films contain no PVC, halogens, or phthalates. Essentially, they contain none of the chemicals identified as being harmful towards the environment.

These films tend to be suitable for short to medium-term applications.

NB: 3M Traffic reflective sheeting products are not vinyls. These sheeting products are made up in different ways. For details of construction on any of these products please contact us.
